

SOFTWARE

racfGUI

Fast and intuitive RACF administration
from a web browser

Simplify RACF admin: a more intuitive experience for smarter working

racfGUI requires no mainframe expertise or specialist skills. Liberating Helpdesk teams and simplifying the RACF User/Group Admin workload, it provides a return on investment based on improved speed, efficiency, productivity and accuracy. Browser-based so you can use the solution securely on any device from anywhere, racfGUI is truly **in the Cloud**.

How you benefit

Replace your IBM mainframe green screen with an intuitive browser-based solution.

- A smoother and more friendly user experience for RACF administration
- No need for expensive mainframe expertise and resources to administer basic RACF functions
- Functionally superior interface means faster and more efficient task throughput
- Save time and costs: one interface replicates commands across multiple RACF databases, removing the need for administrators to log on to multiple TSO / CICS systems
- Secure: all data is exchanged with the mainframe using a secure HTTPS link, while built-in security profiles restrict features to specific administrators
- Governance and audit: full audit log of all RACF changes made is viewable online and downloadable

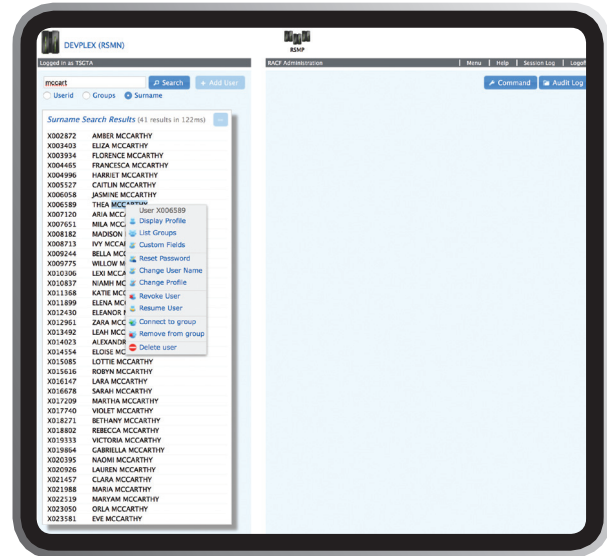

Get smart

racfGUI is a more intelligent way to:

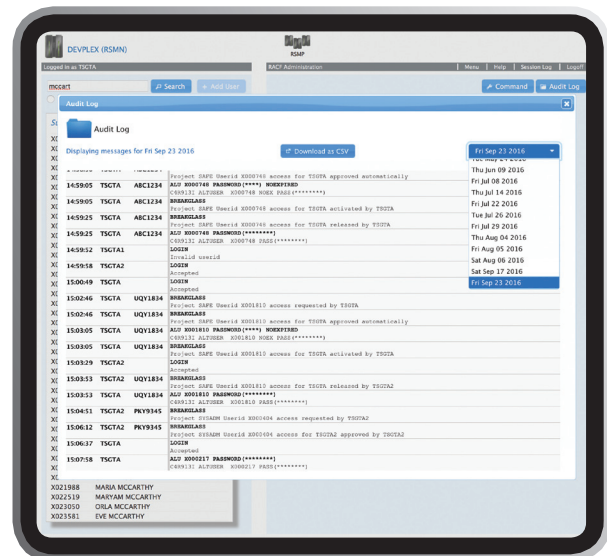

- **Search users** – quickly find users on the system from their surname or userid
- **Manage users** - add new users, display and update user profiles, revoke or resume users, change user name and password, add/remove users from groups, update user custom fields, remove users
- **Manage groups** - display a group profile, list all users of a group, connect or remove users, remove multiple users, update group custom fields
- **Manage multiple RACF databases** – replicate changes across multiple RACF databases anywhere in your enterprise
- **Issue any RACF command** quickly and easily

Key features

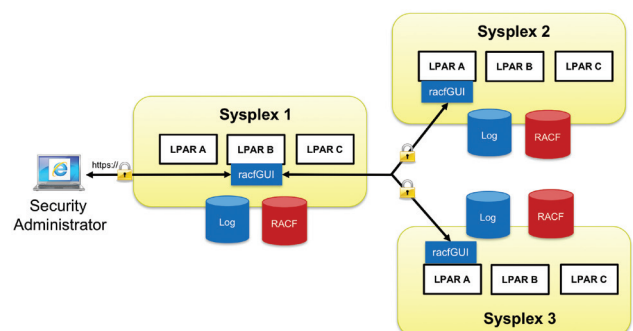

- Minimal configuration: intelligent functionality for fast evaluation and deployment
- 2-tier architecture avoids the need and cost of additional intermediate servers and additional software
- No workstation-based software installation or browser plug-ins required
- Removes CPU / management overhead of additional address spaces, especially TSO
- All code SMP/e installable on z/OS
- Supports all LPARs and Sysplexes from a single browser connection/sign-in
- Secure web server built-in, for encrypted SSL communications using HTTPS protocols
- Secure encrypted connections used for change replication across multiple RACF databases
- Raw command capability for authorised users to issue any RACF command
- All RACF changes written to a real-time audit log

Why RSM?

We are a unique provider of mainframe expertise, software and services - 100% focused on the System z marketplace. Working with many of the world's largest organisations - spanning financial, retail, utility, government and service organisations - no other partner can offer you the same mix of z knowledge, hands-on experience, reliability, flexibility and agility. We are proven to add value.

In 2016 RSM Partners received Ready for IBM Security Intelligence Validation as a leader in z Systems Security Consulting.

racfGUI specification

Platforms Supported

- For use on IBM Mainframes running z/OS only
- Currently supports only RACF managed environments - not ACF/2 or Top Secret

Technical Requirements

PC/Mac supporting web browser IE, Firefox, Chrome, Safari, etc.

Installation & Maintenance

Necessary maintenance is SMP/e packaged and delivered as either an upgrade or PTF.

Licensing

By annual rental fee based on number of named users. Licence fees payable in advance and are inclusive of maintenance and support.

Manuals

The software is supplied with Installation, Operation and User Manuals.

To find out more about these and other RSM Partners services, call +44 (0) 1527 837767 or visit www.rsmpartners.com
